## # ... with 21 more rows
```

We can see a more positive trend for the 2017 data. This can possibly indicate more of a correlation between number of threes made and how well a team might do.

```

## Here, we will examine the trend of points per season between free throws and field goals.

##Comparing different years of basketball will help us understand how offenses evolved in terms of scori

##We have filtered only for years after 1980 because that was the year in which three pointers were firs

##Years after 1980:
threepointera <- season_ball %>% filter(Year >= 1980)

##Looking at overall field goal trends:
threepointera %>% arrange(desc(Year))
```

```
